EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Daniel J. Burnham, Reg. No. 39,618, on November 29, 2004.

2. The application has been amended as follows:

In claim 98, line 11, delete "as defined by said tool" and insert --corresponding to the length and width dimension of the said engaging surface--.

In claim 110, line 10, after "simultaneously," insert --and continuously--. In line 11, after "bore," insert --while the bore is created--.

3. The following is an examiner's statement of reasons for allowance: None of the prior art of record, alone or in combination, discloses a device for developing in living bone an elongated bore that includes, *inter alia*, a compaction tool and a driving mechanism with means for vibrationally moving the tool, where the tool has bone-engaging surface having depth markings; and method of installing a dental implant into a bore in living bone, where the method includes developing the bore with an osteotome tool having piezoelectric transducer element as a driving mechanism, where the bore has length and width dimension corresponding the a length and width dimension of an engaging surface of the osteotome, where the osteotome simultaneously and

continuously engages living bone, while the bore is created; and where a dental implant is screwed into the bore. None of the prior art of record, alone or in combination discloses, a dental system with, inter alia, a screw-type dental implant and an osteotome tool having a cutting edge and a bone-compacting surface and a piezoelectric transducer element as a driving mechanism. Also, none of the prior art of record, alone or in combination, discloses an osteotome tool having, inter alia, a cross-section that increases from a lower end to an upper end, where the tool also has depth markings between the lower end and the upper end. Finally, none of the prior art of record, alone or combination, discloses a set of components with, inter alia, a screw-type dental implant, a compaction tool, and a vibrational driving mechanism for the tool.
